Allowable Subject Matter

Claims 1-45 are allowed.

The following is an examiner's statement of reasons for allowance: regarding claims 1,9,12,16 and 26, patentability resides, at least in part, in the first and second plurality of fingers being capable of being selectively and independently manipulated such that some of the fingers electrically connect a respective one of the first and second electrically conducting/ground plates to a corresponding one of the conducting members and others of the plurality of fingers do not electrically connect a respective one of the conducting plates to a corresponding one of the plurality of electrically conducting members, in combination with the other limitations of the base claim; regarding claims 32, patentability resides, at least in part, in the connector having first and second rows of conducting members within a housing, two conductive plates opposite each other on opposite surfaces of the housing, wherein a first group of rows of electrically conducting members are electrically connected to at least one of the conductive plates and a second group of rows of conducting are not electrically connect to either of the conducting plates, in combination with the other limitations of the base claim and regarding claim 39, patentability resides, at least in part in the first group of first and second rows of conducting members are electrically connected to ground at an "outer portion" of the housing and the second group of rows of conducting members not being connected to ground to transmit signals through the connector, in combination with the other limitations of the base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Roath et al. 6,241,531 and Lloyd et al. 6,273,758 were cited for configurable ground contacts.
